4.3 Class Presentation December 3rd – 10th

Each group will give a short presentation to the class showing off their projects. Groups who present on December 3rd or December 5th will give 5 – 8 minute presentations. To be safe you should assume you will be presenting on the 3rd until otherwise notified. Because of the limited time, these groups will not be showing a live demonstration, instead they can explain the motivation for their application, how their application works, and what challenges they faced using a slideshow presentation. Slides for these presentations must be submitted on Blackboard at least one hour before the class so that I can have them ready on my laptop. They must be submitted either as either PDF or ODP (LibreOffice Impress) files or as a link to a public Google Slides presentation. PowerPoint (PPTX) files may be used, but they will likely render differently as the presentation laptop only has LibreOffice, not Microsoft PowerPoint. Please bear in mind that the projector screen is not as wide as most modern displays. The laptop resolution will be set to 1280 x 1024 so that it fits on the screen. You should make sure your slides look good at that resolution and aspect ratio.

Presentations should discuss the following:

- Function and Motivation of the application
- Core and extra features
- Challenges in development (especially those overcome)

Groups presenting on December 10th will give demonstrations of their working applications. They will have 15 – 20 minutes for their presentations and should be prepared to connect one of their own laptops to the projector using either HDMI or VGA. Again, please remember that to display properly, you will likely need to reduce your resolution to 1280 x 1024 so plan accordingly. Groups who are interested in volunteering for demonstrations rather than presentations should contact their TA. Extra credit of 2 points on the final average will be awarded to all groups who express willingness to give demonstrations AND have their projects in demonstration ready condition on December 10th. Groups do not need to be selected for one of the 3 demonstration slots to receive this credit, but they MUST have projects in a state that they could actually be presented in class. Even if your group is not selected the instructor will be able to judge this when reviewing your code since this is also the final submission deadline.
